

## Combine 4me data in Power BI with data from other sources

The 4me Power BI Connector makes it simple for organizations to share their 4me data in Microsoft Power BI, enabling the creation of highly customized reports and dashboards.

With the 4me Power BI Connector, the integration with 4me is quickly established. This data can subsequently be enriched with data from multiple other sources, such as SQL databases, CSV files and even Excel spreadsheets. Combining 4me data with data from the organization's PABX, for example, gives the ability to show average hold times in a service desk dashboard.

Headquartered in Vienna, Austria, techwork is known in the larger 4me partner community as a quality provider of add-on solutions for 4me. The 4me add-ons from techwork are in use around the globe.

### 4ME INTEGRATION

Easy and fast integration with 4me connector

### DASHBOARDS

Generate dashboards from different sources in Power BI

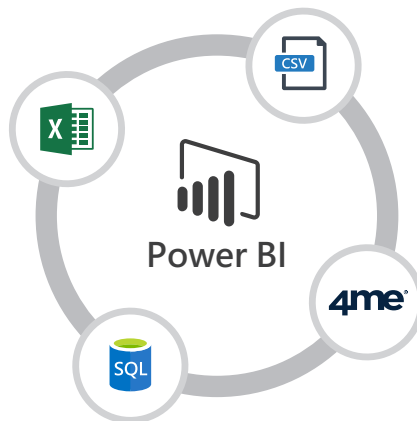

### REDUCE ERROR RATE

Reduce error rates by up to 80%

### SAVE MONEY

Remove the need to manually prepare data

### SAVE TIME

Save time with automated integration
